

YESHWANTH YELLANKI

Wichita, KS — (316) 932-4488 — yellanki.yeshwanth@gmail.com — [linkedin.com/in/yesh284](https://www.linkedin.com/in/yesh284)

Professional Summary

- Dedicated Software Engineer with 3+ years of experience delivering reliable and scalable software solutions.
- Skilled in full-stack development using HTML, CSS, JavaScript, and TypeScript, with experience building responsive interfaces using Bootstrap and collaborating across teams to resolve issues quickly.
- Experienced in building enterprise applications using Spring Boot, secure REST APIs, and microservices, while following engineering best practices to improve quality, performance, and system reliability across the Software Development Lifecycle.
- Designed and optimized data processing pipelines, backend integrations, and event driven workflows supporting analytics, reporting, and operational reliability initiatives.
- Experienced collaborating with platform engineering, security, QA, and business stakeholders to deliver reliable systems under production constraints and evolving business requirements.

Technical Skills

Programming & Database: Python, Java, JavaScript, TypeScript, C, C++, SQL, MongoDB, PostgreSQL, MySQL

Frameworks & Libraries: React, Angular, Redux, Spring Boot, Node.js, Tailwind CSS, Bootstrap, REST API, GraphQL, JWT, OAuth, Kafka, Cypress

Cloud & DevOps: AWS(EC2,S3,RDS,NLB,ECR), Firebase, Docker, Kubernetes, Terraform, Jenkins, CI/CD

Architecture & Development: Microservices, Enterprise Application Development, API Design, Software Development Lifecycle Testing: Cypress, Jest, Jasmine, Cucumber

Tools & Practices: Git, Atlassian (Jira, Confluence), Postman, Veracode, SonarQube, Agile, Design Pattern, Code Reviews

AI & Emerging Technologies: GenAI, LLM, Machine Learning, Deep Learning

Professional Experience

Software Engineer

Dec 2025 – Feb 2026

TVR Consulting LLC

Remote, US

- Engineered cloud native ETL workflows using Python and AWS services to process and normalize operational datasets supporting downstream analytics and reporting across multiple business functions.
- Automated ingestion and transformation pipelines handling 200K+ records per execution cycle, reducing manual reconciliation effort by 45% while improving reporting consistency.
- Optimized relational database queries and indexing strategies across PostgreSQL environments, improving query response times by 35% under concurrent reporting workloads.
- Implemented monitoring and validation checkpoints within data pipelines to detect schema drift, failed transformations, and incomplete loads before downstream propagation.
- Partnered with analysts and business stakeholders to translate ambiguous reporting requirements into production ready data models and reusable transformation logic.
- Strengthened deployment reliability through standardized environment configuration, logging, and operational runbooks that reduced troubleshooting time during production incidents.

Software Engineer

Oct 2024 – Nov 2025

Experian

Remote, US

- Built and maintained scalable backend services using Python and Flask, designing secure REST APIs with authentication, error handling, and structured logging, leading to faster issue resolution and a 30% increase in system reliability.
- Designed and implemented AWS IAM roles and policies with Terraform to strengthen security, enforce least-privilege access, and support successful security audit outcomes.
- Developed Python scripts using Jira REST APIs to automate analysis, field mapping, and issue migration, streamlining the Jira-to-Agile transition for North America projects and reducing manual workload by 50%.
- Collaborated using Atlassian tools (Jira, Confluence) and Git-based workflows to track work, improve delivery quality, and maintain end-to-end ownership of changes.
- Orchestrated automated vulnerability remediation for 30+ Amazon Linux EC2 instances using AWS Systems Manager, patch baselines, and maintenance windows, eliminating configuration drift and reducing manual maintenance cycles.
- Integrated Veracode and SonarQube quality gates into Jenkins CI/CD pipelines, improving code maintainability metrics and reducing critical code quality violations prior to production deployment.
- Contributed to migration of legacy workloads into containerized Docker and Kubernetes environments, improving deployment consistency and enabling scalable microservices delivery across shared infrastructure platforms.
- Built serverless workflow orchestration pipelines using AWS Step Functions and Lambda to support stateful event processing and operational automation across distributed systems.
- Designed AWS infrastructure architecture diagrams documenting EC2 hosted Kafka integrations, downstream analytics flows, and cross account communication patterns used by engineering and platform teams.
- Led production deployment activities including change request approvals, release coordination, rollback validation, and post deployment issue resolution for business critical application updates.
- Authored operational documentation, deployment procedures, and troubleshooting guides that improved onboarding efficiency and reduced dependency on tribal knowledge across engineering teams.
- Collaborated with security, platform engineering, QA, and business stakeholders throughout the SDLC to improve release quality, deployment governance, and production stability.

Database Specialist

Jul 2023 – Oct 2023

Ticket Socket Inc

Remote, US

- Managed large scale Excel based operational datasets supporting venue allocation and seating logistics for FIBA World Cup event preparation across multiple venues and stakeholder groups.
- Validated and reconciled structured event data to improve downstream reporting accuracy and reduce inconsistencies impacting logistics coordination and operational planning.
- Automated repetitive data validation workflows and spreadsheet reconciliation tasks, reducing manual processing effort and improving turnaround time for operational reporting requests.
- Coordinated with event operations teams to resolve data discrepancies under tight delivery timelines while maintaining data integrity across rapidly changing scheduling requirements.

Software Engineer

Nov 2021 – Aug 2022

Cognizant Technology Solutions

Hyderabad, India

- Completed Java Full Stack Engineer training in 6 months, contributing to tools that improved system response time by 30% for the client project.
- Implemented unit and integration tests using Jest and Cypress for the React Components, increasing test coverage by 30% and ensuring high code quality and maintainability across Projects.
- Built a performance-optimized server-side rendered table with pagination and sorting using React, Node.js, and REST APIs, reducing load times and enhancing UI.
- Built enterprise-style backend services using Spring Boot concepts and modern web development practices, strengthening API development and microservices understanding.
- Implemented automated unit and integration testing frameworks using Jest and Cypress, increasing frontend test coverage by 30% and improving release confidence across development cycles.
- Participated in Agile delivery processes including sprint planning, code reviews, defect resolution, and collaborative debugging to improve delivery quality and reduce regression issues.
- Contributed to reusable UI component development and API integration efforts that accelerated feature delivery timelines across multiple project modules.

Technical Projects

AI Powered Resume Builder | *React, Tailwind CSS, OpenAI, Node.js, ATS Scoring, Strapi, Vite*

2025

- Architected and developed a full-stack AI powered resume platform enabling dynamic resume generation, ATS scoring, and content optimization using OpenAI APIs and Node.js backend services.
- Built responsive frontend workflows using React and Tailwind CSS, enabling users to create, edit, and export resumes through optimized multi step interfaces.
- Integrated AI driven recommendation workflows to generate contextual resume suggestions and improve keyword alignment for ATS compatibility.
- Implemented authentication and session management using Clerk while securing API interactions and user specific document operations.
- Designed reusable REST API integrations and modular frontend components to support maintainability and future feature scalability.
- Deployed production ready application architecture using Vite and modern frontend build optimization techniques.

Diabetic Retinopathy Classification | *Deep Learning, CNN, Binary Classification*

2022

- Developed a CNN based image classification model for diabetic retinopathy detection using large scale retinal image datasets and supervised deep learning techniques.
- Improved model accuracy from 92% to 98% through iterative hyperparameter tuning, architecture refinement, and overfitting reduction strategies.
- Applied preprocessing, validation, and training optimization techniques to improve model generalization across unseen clinical image samples.
- Evaluated model performance using classification metrics and validation datasets to ensure prediction reliability and consistency.

Certifications and Research Publications

- **AWS Certified Cloud Practitioner** | View Certification (Mar 2026)
- **E Challan System for Non-Parking Areas** | View Publication (Apr 2021)

Education

Wichita State University

Wichita, KS

Master of Science in Data Science

May 2024

SCSVMV University

Tamil Nadu, India

Bachelor of Engineering in Computer Science and Engineering

May 2021
